Appdev1 Project Report

Placement Portal App

1. Student Details

Name: Raval Stuti Bhargavkumar
Roll Number: DS23F1002548
Email: 23f1002548@ds.study.iitm.ac.in
Course: Appdev1

About Me: I am a student of online BS in Data Science and Application Degree of IIT Madras. Currently I am at Diploma level. I have deep interest in Web application development and new data-driven technologies.

2.Project Details

Project Title: Placement Portal

Problem Statement:
To design and build a web-based application that allows Admin, Company and Students to interact with the system based on their roles. That also manages company approvals, track student applications, and avoid duplicate registrations.

Approach:
The Placement Portal is a web application developed using Flask that allows students to apply for placement drives and companies to manage recruitment processes.

3.AI/LLM Declaration

I used ChatGPT to assist in writing SQLAlchemy model definitions, some UI related topics.
The extent of AI/LLM usage is around **20-25%**, limited to code suggestions and documentation formatting.
All final implementation logic, debugging, and integration were done manually.

4.Technologies and Frameworks Used

- Python
- Flask
- SQLite
- HTML
- CSS
- Bootstrap
- GitHub

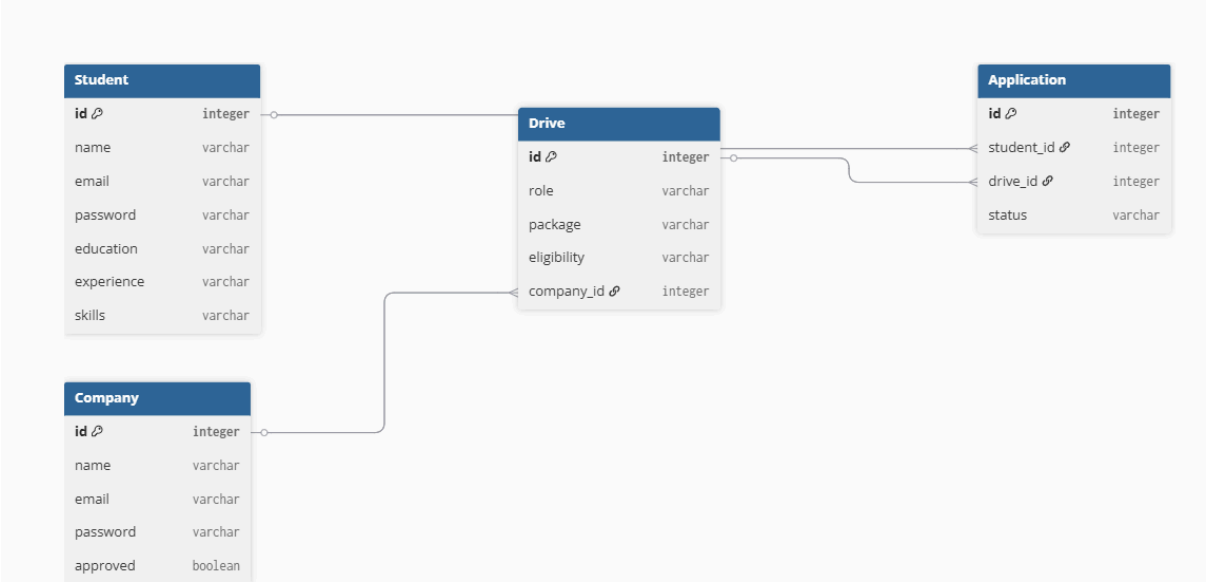

5.ER Diagram

Tables:

1. Student - stores attributes like id ,name, email, password, education, experience, and skills.
2. Company - stores attributes like id, name, email, password, approve.
3. Drive - stores information about placement drives created by companies.
4. Application - stores information about students applying to placement drives.

Relationships:

- One-to-many → Company → Drive
- One-to-many → Student → Application
- One-to-many → Drive → Application
